

PastureDRY™

APPLICATION FOR MUD

APPLICATION FOR MUD:(One gallon will treat up to 10,000 sq. ft. depending on the depth of the mud).

Dilution ratio:

1:20 – treats 1,000 sq. ft. to a depth of 36-40"

1:40 – treats 2,000 sq. ft. to a depth of 18-20"

1:60 – treats 3,000 sq. ft. to a depth of 12-14"

Watering instructions – you will fill your hose end sprayer with **PastureDRY™**, set your dial to the following settings.

6oz. – 36-40", (each quart will treat 250 sq. ft.) or 1,000 sq. ft. total.

3oz – 18-20", (each quart will treat 500 sq. ft.) or 2,000 sq. ft. total.

2oz – 12-14" (each quart will treat 750 sq. ft.) or 3,000 sq. ft. total.

Once you have applied **PastureDRY™** to the desired area, water with plain water for 2-3 minutes (the first day).

Next day & every other day water with plain water for 10-15 minutes or until it starts to puddle (then stop) (2-3) watering days with dry days in-between, **(It is very important that the wet/dry process be followed for the best possible results).**

If it rains, let the rain be your watering day. Finally, water 15-20 minutes for 2 days **with a dry day in-between**. This completes your watering application. Every time it rains it will push **PastureDRY™** down to the desired depth and breakup the barrier that is keeping the water from penetrating down & creating mud.

If you have any questions concerning the application process or anything else, please don't hesitate to call or email me.
